Investment Objective	The primary investment objective of the Scheme is to seek capital appreciation by investing in a portfolio of debt and money market securities. It is envisaged that the Scheme will invest only in such securities which mature on or before the date of maturity of the Scheme. The Scheme may also use fixed income derivatives for hedging and portfolio balancing.	
Asset Allocation Pattern	Types of Instruments	Normal Allocation (% of Net Assets)
	* # Debt securities	0% - 100%
	Money Market Instruments	0% - 100%
	*Debt securities may include securitized debts up to 100% of each Scheme's net assets. # Debt Instruments may include fixed income derivatives (only for hedging and portfolio re-balancing) up to 100% of each Scheme's net assets.	
Investment Strategy	The Investment Manager will invest only in those debt securities that are rated investment grade by a domestic credit rating agency authorised to carry out such activity, such as CRISIL, ICRA, CARE etc. or in unrated debt securities, which the Investment Manager believes to be of equivalent quality. Where investment in unrated debt securities is sought to be made, specific approval of the Board of Directors of the AMC and Trustee shall be obtained prior to the investment. In-house research by the Investment Manager will emphasize on credit analysis, in order to determine credit risk.	
Risk Profile	Mutual Fund Units involve investment risks including the possible loss of principal. Scheme specific risk factors are summarized below: (i) Market Risk (ii) Credit Rating Risk (iii) Market Liquidity Risk (iv) Liquidity Risk on account of unquoted and unlisted securities (v) Credit Risk (vi) Re-investment Risk (vii) Interest Rate Risk (viii) Concentration Risks (ix) Risk associated with Listing of Units (x) Risk associated with close ended schemes (xi) Risk associated with trading in fixed income derivatives and (xii) Securitized Asset Risk. Please read the SID carefully for details on risk factors before investment.	
Risk Management Strategies	Risk	Risk mitigants / management strategy
	Interest rate risk Fall in the value of the portfolio due to upward movement of interest rates	Although this risk exists in a fixed income portfolio, the closed ended nature of the Scheme mitigates the risk as portfolio construction at the time of inception leads to creation of portfolio with securities whose maturity date is in line with the maturity date of the Scheme.
	Credit risk Issuer's inability to meet interest and principal payments on its debt obligations	The Risk Management team is responsible for continuous surveillance of issuers. The endeavour is to create a portfolio with high credit quality in the required investment horizon.
	Liquidity risk High impact costs for liquidation of securities held in the portfolio	In a closed ended product, liquidity risk on account of underlying securities' market liquidity does not exist as intermediate liquidity is not required. Liquidity access is done through contractual maturity of the security, which is in line with the term of the closed ended Scheme.
	Concentration risk Concentrated investment in single security or single issuer	We have internal fund manager guidelines for maximum exposure to a single issuer and also concentration limits on account of large holdings to avoid undue concentration in portfolio.
	Event risk Price risk due to company or sector specific event	The endeavour is to invest in securities of issuers, which have high balance sheet strength in the investment horizon to eliminate single company risk.
Options	<ul style="list-style-type: none"> • Growth* • Dividend Payout *default Option	
Maturity Date	A day at the end of 13 months from the Date of Allotment	
	The exact maturity date will be disclosed in the account statement/allotment advice. If such day is not a Business Day, the immediately succeeding Business Day will be considered as the maturity date.
